Notes on Computer Project #12

Comments about the assignment and responses to frequently asked questions will
be added to this file as necessary.

***** comments added on 11/26/18 *****

1) Please note that you are required to create a makefile which controls the
translation of your program, and that the name of your executable file must be
"proj12".

2) For your convenience, I have supplied the following interface file, which
contains the declaration of function "update":

  ˜cse320/Projects/project12.support.h

Since that file may not be modified, there is no reason to copy it into your
account. Instead, use its absolute pathname in the appropriate preprocessor
directive. For example:

  #include "/user/cse320/Projects/project12.support.h"

Any source code file which uses that function should contain the appropriate
preprocessor directive.

3) Recall that type "unsigned" is the same as "unsigned int" (and "unsigned
long int", for that matter). It represents a 32-bit unsigned integer value.
